

Finding the area of a quadrilateral

Recall: $A = \frac{1}{2}bh$ $A = \frac{1}{2}abs\sin C$

These can be used to find the area of a triangle.

Example

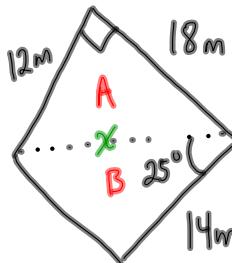

$$\text{Area} = \frac{1}{2}abs\sin C$$

$$\text{Area} = \frac{1}{2}(5\text{m})(12\text{m})\sin 100^\circ$$

$$\text{Area} = 29.5 \text{ m}^2$$

Example

Triangle A (right Δ)

$$\text{Area}_A = \frac{1}{2}bh$$

$$\text{Area}_A = \frac{1}{2}(12\text{m})(18\text{m})$$

$$\boxed{\text{Area}_A = 108 \text{ m}^2}$$

To find x:

$$c^2 = a^2 + b^2$$

$$c^2 = 12^2 + 18^2$$

$$c^2 = 468 \text{ m}^2$$

$$c = 21.6 \text{ m}$$

Area of Triangle B:

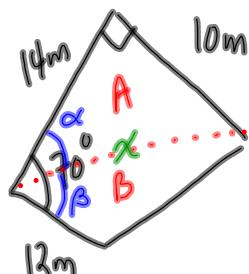

$$\text{Area}_B = \frac{1}{2}abs\sin C$$

$$\text{Area}_B = \frac{1}{2}(14\text{m})(21.6\text{m})\sin 25^\circ$$

$$\boxed{\text{Area}_B = 64.0 \text{ m}^2}$$

$$\text{Total Area} = 108 \text{ m}^2 + 64.0 \text{ m}^2$$

$$\text{Total Area} = 172 \text{ m}^2$$

ExampleFind the area of Triangle A (right Δ)

$$\text{Area}_A = \frac{1}{2} bh$$

$$\text{Area}_A = \frac{1}{2}(10\text{m})(14\text{m})$$

$$\text{Area}_A = 70\text{m}^2$$

$$\text{Find } \chi: c^2 = a^2 + b^2$$

$$c^2 = 14^2 + 10^2$$

$$c^2 = 296\text{m}^2$$

$$c = 17.2\text{m}$$

$$\text{Find } \alpha: \tan \alpha = \frac{\text{opp}}{\text{adj}}$$

$$\tan \alpha = \frac{10\text{m}}{14\text{m}}$$

$$\alpha = \tan^{-1}\left(\frac{10}{14}\right)$$

$$\alpha = 35.5^\circ$$

$$\text{Find } \beta:$$

$$\alpha + \beta = 70^\circ$$

$$35.5^\circ + \beta = 70^\circ$$

$$\beta = 34.5^\circ$$

Find the Area of B:

$$\text{Area}_B = \frac{1}{2} ab \sin C$$

$$\text{Area}_B = \frac{1}{2}(12\text{m})(17.2\text{m}) \sin 34.5^\circ$$

$$\text{Area}_B = 58.4\text{m}^2$$

$$\text{Total Area} = 70\text{m}^2 + 58.4\text{m}^2$$

$$\text{Total Area} = 128.4\text{m}^2$$
