

Velocity

Velocity: $\vec{v} = \frac{\Delta \vec{d}}{\Delta t}$ ← displacement .

Speed: $v = \frac{\Delta d}{\Delta t}$ ← distance

Rearranging the velocity equation:

for Δd : $v = \frac{\Delta d}{\Delta t}$

$$\Delta d = v \Delta t$$

for Δt : $v = \frac{\Delta d}{\Delta t}$

$$v \Delta t = \Delta d$$

$$\Delta t = \frac{\Delta d}{v}$$
